Gilmore & Associates Becomes Proficient Autodesk Civil 3D Users Following Synergis Training

Quakertown, PA, March 14, 2006 — Synergis Technologies[®] Engineering Design Solutions Division announced today that Gilmore & Associates, Inc. (www.gilmore-assoc.com), a full service Pennsylvania engineering and consulting firm serving municipalities, turned to Synergis Engineering Design Solutions for training and support during their implementation of Autodesk Civil 3D. The company credited the support and service offerings from Synergis and the quality of Autodesk software for helping them perform their job at the highest level of efficiency and accuracy.

“We realized that the release of Civil 3D was not a ‘use it out of the box’ upgrade. The software is completely new,” said John Tully, a civil designer at Gilmore & Associates, Inc. “Training allowed us a focused approach to learning what to do and not to do with our new software. I’ve had dealings with other Autodesk resellers during my career and by far, Synergis offers the quickest response, widest variety of services and expertise. I would recommend them to anyone.”

The on-site training at Gilmore’s offices was led by Bill Frederick, a Synergis Design Applications Engineer with more than 11 years of industry experience and an Autodesk Civil 3D Implementation Certified Expert. He said, “Gilmore & Associates needed a training solution that would accelerate their software integration and provide a fast return on their investment. We were able to deliver exactly what they needed. Now proficient with Civil 3D, they are more productive than ever.”

Synergis Engineering Design Solutions hosts learning events throughout the year to help companies better understand how to maximize their Autodesk investment through education and customized programs. The company boasts a pedigreed group of infrastructure experts who teach classes. Classes are purposely small with only up to eight students enrolled to ensure personal attention.

About Gilmore & Associates, Inc.
