Synergis Engineering Design Solutions Helps Greenray Industries Successfully Transition to AutoCAD Electrical

Following Synergis Training Greenray Boasts Greater Proficiency and Productivity

Quakertown, PA, July 5, 2006 — Synergis[®] Technologies Engineering Design Solutions Division today announced that its technical training and support played a significant role in the successful AutoCAD 2004 to AutoCAD Electrical 2007 software transition for Mechanicsburg, Pennsylvania-based Greenray Industries (www.Greenrayindustries.com). Greenray Industries, a leading manufacturer of precision frequency control products designed for communications, military, aerospace and instrumentation applications, required a software package that would help them increase output and decrease errors in the drafting department. After deciding to make the transition to Autodesk's AutoCAD Electrical software, Greenray turned to Synergis for training.

Under the guidance of Synergis Design Applications Engineer and Autodesk Certified Expert Todd Schmook, Greenray went from inexperienced to fully-productive. The company credits Synergis for helping them improve their software skills, increase production, and simultaneously reduce the amount of time spent on any given project.

"The training I received in AutoCAD Electrical was definitely needed. I wouldn't have known where to begin without it and I would have needed twice as much time to learn the new software," said Zane Walls, draftsman at Greenray Industries.

"Because of Synergis' curriculum, we were able to move from AutoCAD to AutoCAD

Electrical painlessly and quickly realize the benefits, including the increased ease of creating and maintaining our drawings and the ability to catch errors that we might have missed.”

To ensure Greenray Industries’ smooth transition to AutoCAD Electrical, they also used Synergis technical support to help them retain what they had learned. “It is a fantastic service. Whenever I needed a question answered or thought I might get stuck, I called the Synergis experts. They offered me great customer service and outstanding tech support which ultimately helped us avoid some potentially time consuming problems.” added Walls.

“Greenray Industries is a company with foresight. They followed a text book approach to adopting new software by investing in training from the start, rather than trying to go it alone. They not only avoided costly downtime, but paved the way to their success,” said David Sharp, President and Chief Executive Officer of Synergis Technologies. “We measure ourselves against our customers’ success and stand behind all of those who we serve. Having Greenray Industries on our list of thriving customers certainly makes us proud.”

Synergis Engineering Design Solutions hosts learning events throughout the year to help companies better understand how to maximize their Autodesk investment through education and customized programs. The company boasts a pedigreed group of manufacturing design applications engineers, all who are Autodesk Inventor Certified Experts. Training classes are purposely small with a maximum of eight students enrolled for each hands-on course to ensure all students receive personal attention. For more information on the instructors and schedule of upcoming classes see: http://www.synergis.com/files/training/programs/training_main.shtml

About Synergis Engineering Design Solutions

Synergis’ Engineering Design Solutions, an independent division of Synergis[®] Technologies, Inc., is a leading Autodesk[®] Value Added Reseller for Manufacturing, Infrastructure, and Building Solutions in the Mid-Atlantic region. Headquartered in Quakertown, Pennsylvania, it is also recognized as an Autodesk[®] Premier Solutions Provider (PSP), Manufacturing Specialist, Autodesk’s highest level of authorization. The Engineering Design Solutions Division provides companies in Manufacturing,

Government, AEC, and related industries the best quality Autodesk software, training, professional services, and support to ensure their maximum productivity, competitive business advantage, and return on investment. As an Autodesk[®] Authorized Training Center, Synergis provides onsite customized and classroom training at five convenient locations, taught by Autodesk Certified Experts. For more information on the Engineering Design Solutions Division, visit www.synergis.com or call 800-836-5440.
